EXAM AWS CERTIFIED DEVELOPER - ASSOCIATE DVA-C02 TOPIC 1 QUESTIO...

Exam question from Amazon's AWS Certified Developer - Associate DVA-C02
Question #: 216
Topic #: 1
[All AWS Certified Developer - Associate DVA-C02 Questions]

A developer is working on an AWS Lambda function that accesses Amazon DynamoDB. The Lambda function must retrieve an item and update some of its attributes, or create the item if it does not exist. The Lambda function has access to the primary key.

Which IAM permissions should the developer request for the Lambda function to achieve this functionality?

A. dynamodb:DeleleItem
dynamodb:GetItem
dynamodb:PutItem

B. dynamodb:UpdateItem
dynamodb:GetItem
dynamodb:DescribeTable

C. dynamodb:GetRecords
dynamodb:PutItem
dynamodb:UpdateTable

D. dynamodb:UpdateItem
dynamodb:GetItem
dynamodb:PutItem

D. dynamodb:UpdateItem, dynamodb:GetItem, and dynamodb:PutItem

Here's why:

dynamodb:GetItem: This permission allows the Lambda function to retrieve an item from DynamoDB.

dynamodb:UpdateItem: This permission allows the Lambda function to update the attributes of an item in DynamoDB.

dynamodb:PutItem: This permission allows the Lambda function to create a new item if it doesn't already exist in the DynamoDB table.

Selected Answer: B

x A: as delete is not required. Plus Put item is not required, update lets you create a new item if it doesn't already exist
B: meets requirements. DescribeTable helps provide a list of attributes that can be used to update.
x C: put not required; getrecords does not exist
x D: put not required.

Selected Answer: D

UpdateItem: Edits an existing item's attributes
https://docs.aws.amazon.com/amazondynamodb/latest/APIReference/API_UpdateItem.html
GetItem: retrieves attributes from the Thread table
https://docs.aws.amazon.com/amazondynamodb/latest/APIReference/API_GetItem.html#API_GetItem_Examples
PutItem: Creates a new item, or replaces an old item with a new item.

https://docs.aws.amazon.com/amazondynamodb/latest/APIReference/API_PutItem.html

Selected Answer: D

PutItem is to CREATE new item or replace old item with new item
GetItem is to retrieve an item
UpdateItem so to update the attributes

Hence answer D
