EXAM AWS CERTIFIED DEVELOPER - ASSOCIATE DVA-C02 TOPIC 1 QUESTIO...

Exam question from Amazon's AWS Certified Developer - Associate DVA-C02
Question #: 55
Topic #: 1
[All AWS Certified Developer - Associate DVA-C02 Questions]

An application uses Lambda functions to extract metadata from files uploaded to an S3 bucket; the metadata is stored in Amazon DynamoDB. The application starts behaving unexpectedly, and the developer wants to examine the logs of the Lambda function code for errors.
Based on this system configuration, where would the developer find the logs?

A. Amazon S3

B. AWS CloudTrail

C. Amazon CloudWatch

D. Amazon DynamoDB

Selected Answer: C

C) - AWS Lambda automatically sends logs generated by your function to Amazon CloudWatch Logs.

B) Eliminated - CloudTrail logs API activity and management operations across AWS, such as who invoked the Lambda function. However, it does not provide the function's execution logs.
