EXAM AWS CERTIFIED DEVELOPER - ASSOCIATE DVA-C02 TOPIC 1 QUESTIO...

Exam question from Amazon's AWS Certified Developer - Associate DVA-C02
Question #: 15
Topic #: 1
[All AWS Certified Developer - Associate DVA-C02 Questions]

A developer is deploying an AWS Lambda function The developer wants the ability to return to older versions of the function quickly and seamlessly.
How can the developer achieve this goal with the LEAST operational overhead?

A. Use AWS OpsWorks to perform blue/green deployments.

B. Use a function alias with different versions.

C. Maintain deployment packages for older versions in Amazon S3.

D. Use AWS CodePipeline for deployments and rollbacks.

Selected Answer: B

A) Eliminated - OpsWorks is unnecessary for Lambda function deployments.Blue/green deployments are more suited for EC2 or ECS applications, not for a simple Lambda rollback.
B) Correct - Quickly switch the alias to an older version
C) Eliminated - Requires manual work to download and redeploy older versions.
D) Eliminated - CodePipeline introduces unnecessary complexity

Selected Answer: B

keyword: LEAST operational overhead

=> discard D: it does more work, so cost for many works also increase
=> discard C: it makes effort for manual work, adding operational overhead and delays.
=> Discard A: Designed for managing server configurations, not for managing lambda function

B: most seamless, only change version by pointing an alias (eg: production) to specific Lambda Version. On the other hand, it's free

Selected Answer: A

I am not sure if the question is about which deployment strategy to choose from if we want to roll back seamlessly once deployed. Or is the question about how to manage the deployment versions to be able to roll back. does anyone has similar doubts ? please help , thanks

Selected Answer: B

I considered D as well which refers to using CodeDeploy. however using codedeploy adds more work. So alias makes more sense.
