EXAM AWS CERTIFIED DEVELOPER - ASSOCIATE DVA-C02 TOPIC 1 QUESTIO...

Exam question from Amazon's AWS Certified Developer - Associate DVA-C02
Question #: 255
Topic #: 1
[All AWS Certified Developer - Associate DVA-C02 Questions]

A company runs a batch processing application by using AWS Lambda functions and Amazon API Gateway APIs with deployment stages for development, user acceptance testing, and production. A development team needs to configure the APIs in the deployment stages to connect to third-party service endpoints.

Which solution will meet this requirement?

A. Store the third-party service endpoints in Lambda layers that correspond to the stage.

B. Store the third-party service endpoints in API Gateway stage variables that correspond to the stage.

C. Encode the third-party service endpoints as query parameters in the API Gateway request URL.

D. Store the third-party service endpoint for each environment in AWS AppConfig.

Selected Answer: B

D: additional complex
C: this is typically used to send data to the end point. Not to configure the endpoint itself. Less secure.
