EXAM AWS CERTIFIED DEVELOPER - ASSOCIATE DVA-C02 TOPIC 1 QUESTIO...

Exam question from Amazon's AWS Certified Developer - Associate DVA-C02
Question #: 355
Topic #: 1
[All AWS Certified Developer - Associate DVA-C02 Questions]

A developer is writing a web application that is deployed on Amazon EC2 instances behind an internet-facing Application Load Balancer (ALB). The developer must add an Amazon CloudFront distribution in front of the ALB. The developer also must ensure that customer data from outside the VPC is encrypted in transit.

Which combination of CloudFront configuration settings should the developer use to meet these requirements? (Choose two.)

A. Restrict viewer access by using signed URLs.

B. Set the Origin Protocol Policy setting to Match Viewer.

C. Enable field-level encryption.

D. Enable automatic object compression.

E. Set the Viewer Protocol Policy setting to Redirect HTTP to HTTPS.

Selected Answer: BE

Choose Match Viewer only if you specify Redirect HTTP to HTTPS or HTTPS Only for Viewer Protocol Policy.
CloudFront caches the object only once even if viewers make requests using both HTTP and HTTPS protocols.
