EXAM AWS CERTIFIED DEVELOPER - ASSOCIATE DVA-C02 TOPIC 1 QUESTIO...

Exam question from Amazon's AWS Certified Developer - Associate DVA-C02
Question #: 384
Topic #: 1
[All AWS Certified Developer - Associate DVA-C02 Questions]

A company uses an AWS CloudFormation template to deploy and manage its AWS infrastructure. The CloudFormation template creates Amazon VPC security groups and Amazon EC2 security groups.

A manager finds out that some engineers modified the security groups of a few EC2 instances for testing purposes. A developer needs to determine what modifications occurred.

Which solution will meet this requirement?

A. Add a Conditions section statement in the source YAML file of the template. Run the CloudFormation stack.

B. Perform a drift detection operation on the CloudFormation stack.

C. Execute a change set for the CloudFormation stack.

D. Use Amazon Detective to detect the modifications.

Selected Answer: B

You can use drift detection to identify stack resources to which configuration changes have been made outside of CloudFormation management.
