Exam question from Amazon's AWS Certified Developer - Associate DVA-C02

Question #: 424

Topic #: 1

[All AWS Certified Developer - Associate DVA-C02 Questions]

A developer is building an application integrating an Amazon API Gateway with an AWS Lambda function. When calling the API, the developer receives the following error:

Wed Nov 08 01:13:00 UTC 2017 : Method completed with status: 502

What should the developer do to resolve the error?

A. Change the HTTP endpoint of the API to an HTTPS endpoint.

B. Change the format of the payload sent to the API Gateway.

C. Change the format of the Lambda function response to the API call.

D. Change the authorization header in the API call to access the Lambda function.

Selected Answer: C

When you see a 502 Bad Gateway error in Amazon API Gateway, it means that the API Gateway was unable to get a valid response from Lambda.

Selected Answer: C

In the logs, review the format of your Lambda function's response to your API. If the response isn't in the required JSON format, then reformat it.

Selected Answer: C

Correct response format should be

```
{
"statusCode": 200,
"headers": {
"Content-Type": "application/json"
},
"body": "{\"message\": \"Success\"}"
}
```
