EXAM AWS CERTIFIED DEVELOPER - ASSOCIATE DVA-C02 TOPIC 1 QUESTIO...

Exam question from Amazon's AWS Certified Developer - Associate DVA-C02
Question #: 465
Topic #: 1
[All AWS Certified Developer - Associate DVA-C02 Questions]

A company's AWS accounts are in an organization in AWS Organizations. An application in Account A uses environment variables that are stored as parameters in AWS Systems Manager Parameter Store. A developer is creating a new application in Account B that needs to use the same environment variables.

The application in Account B needs access to the parameters in Account A without duplicating the parameters into Account B.

Which solution will meet these requirements with the LEAST operational overhead?

A. Configure the application in Account B to use credentials for an IAM user in AccountA that has access to the parameters.

B. Create an assumable IAM role in Account A. Grant the role the permission to access the parameters.

C. Configure cross-account resource sharing for the parameters by using AWS Resource Access Manager (AWS RAM).

D. Write a script that stores the parameter values in a private Amazon S3 bucket that both accounts can access.

Selected Answer: B

Its B , Ram not supported for SSMParams

AWS RAM: As of now, AWS Systems Manager Parameter Store is not a supported resource type for AWS Resource Access Manager (RAM), so this option is not feasible.

Its C , This changed in 2024 as per link below from Shakthi . Question also hints that AWS ORG is used , and ORG is requirement for RAM .

Selected Answer: C

https://aws.amazon.com/blogs/mt/introducing-parameter-store-cross-account-sharing/
RAM Share is the easy and best way to share resources across Accounts.
