EXAM AWS CERTIFIED DEVELOPER - ASSOCIATE DVA-C02 TOPIC 1 QUESTIO...

Exam question from Amazon's AWS Certified Developer - Associate DVA-C02
Question #: 95
Topic #: 1
[All AWS Certified Developer - Associate DVA-C02 Questions]

A developer is leveraging a Border Gateway Protocol (BGP)-based AWS VPN connection to connect from on-premises to Amazon EC2 instances in the developer's account. The developer is able to access an EC2 instance in subnet A, but is unable to access an EC2 instance in subnet B in the same VPC.

Which logs can the developer use to verify whether the traffic is reaching subnet B?

A. VPN logs

B. BGP logs

C. VPC Flow Logs

D. AWS CloudTrail logs

Selected Answer: C

VPC Flow Logs capture information about the IP traffic going to and from network interfaces in a VPC. This includes traffic that traverses a VPN connection. VPC Flow Logs can be used to monitor and troubleshoot connectivity issues, including verifying whether traffic is reaching a particular subnet within the VPC.

Selected Answer: C

VPC Flow Logs capture detailed information about the traffic flowing to and from network interfaces in a VPC.

D) Eliminated - AWS CloudTrail logs record API-level activity in an AWS account, hey do not provide network-level traffic details for verifying traffic reaching specific subnets.
