EXAM AWS CERTIFIED AI PRACTITIONER AIF-C01 TOPIC 1 QUESTION 5 DISC...

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01

Question #: 5

Topic #: 1

[All AWS Certified AI Practitioner AIF-C01 Questions]

A company is using a pre-trained large language model (LLM) to build a chatbot for product recommendations. The company needs the LLM outputs to be short and written in a specific language. Which solution will align the LLM response quality with the company's expectations?

A. Adjust the prompt.

B. Choose an LLM of a different size.

C. Increase the temperature.

D. Increase the Top K value.

Selected Answer: A

B not correct - The size of LLM may not affect the size of the output.
C not correct - Temperature controls the creativity of the output, not size

of the output.
D not correct - Top-K controls number of next possible tokens, not size of the output.
A is correct - In the prompt itself we can control various attributes of the output like size, language etc.

Selected Answer: A

A) Adjust the prompt. is correct – You can directly instruct the model in the prompt to produce concise responses in the desired language, ensuring output meets the company's requirements.
B) Choose an LLM of a different size. not correct – Changing the model size may impact performance or understanding, but it won't guarantee the output is shorter or in a specific language.
C) Increase the temperature. not correct – Temperature affects randomness and creativity in responses, not the length or format.
D) Increase the Top K value. not correct – The model can choose from more options, which makes output more varied and creative, but it doesn't control the length of the answer or the language

Selected Answer: A

Adjusting the prompt allows you to guide the model to produce responses that are more aligned with your desired output. By modifying the prompt, you can specify the length and language requirements more clearly. For example, you could ask the model to "Provide a short

product recommendation in [specific language]." This is the most direct way to control the behavior of the LLM and ensure it meets the company's needs.

Selected Answer: A

A: Adjust the prompt.

Explanation:
The behavior of a large language model (LLM) can be significantly influenced by the prompt it receives. To make the outputs short and written in a specific language, you can adjust the prompt to explicitly instruct the model to produce concise responses and specify the desired language. For example:

"Provide a brief recommendation in Spanish."
"Give a short response in French."
This is the most direct way to align the output with the company's expectations without requiring modifications to the model or its parameters.
