Explicação:
O Amazon Q Developer é um assistente de IA generativa da AWS projetado para desenvolvedores. Ele pode:

Gerar trechos de código (snippets) com base em perguntas feitas em linguagem natural.

Fornecer explicações sobre o código, com rastreamento de referências a documentação.

Identificar e rastrear licenças de código aberto, ajudando a evitar problemas legais ao reutilizar trechos de código.

As demais opções estão incorretas:

B se refere ao AWS Lambda, que executa código sem provisionar servidores.

C mistura comandos de voz e busca em linguagem natural, algo mais

associado ao Amazon Lex ou Alexa, não ao Q Developer.

D descreve serviços como Amazon Transcribe, que convertem áudio em texto.

Explicação:
Quando uma VPC não pode ter acesso à internet, mas ainda precisa se comunicar com serviços da AWS como o Amazon Bedrock, a solução ideal é o AWS PrivateLink.

O PrivateLink permite o acesso privado e seguro a serviços da AWS (como Bedrock, S3, etc.) sem sair da rede da AWS e sem usar a internet pública.

Isso é essencial em ambientes regulados, como instituições financeiras, onde há requisitos rígidos de conformidade e segurança.

🚫 Voice Commands for Coding – Amazon Q Developer does not natively support voice commands for coding. While you could integrate it with Alexa or other voice recognition tools, this is not a primary feature.
