Exam question from Amazon's AWS Certified AI Practitioner AIF-C01

Question #: 13

Topic #: 1

[All AWS Certified AI Practitioner AIF-C01 Questions]

A financial institution is using Amazon Bedrock to develop an AI application. The application is hosted in a VPC. To meet regulatory compliance standards, the VPC is not allowed access to any internet traffic. Which AWS service or feature will meet these requirements?

A. AWS PrivateLink

B. Amazon Macie

C. Amazon CloudFront

D. Internet gateway

Selected Answer: A

Answer is A, but this is a question for Solutions Architect exam..

upvoted 1 times

4974d0b 1 year, 1 month ago

Selected Answer: A

The correct answer is:

A. AWS PrivateLink

Explanation:
Since the VPC does not have internet access, the financial institution must use a private connectivity option to access Amazon Bedrock, which is a managed AI service. AWS PrivateLink allows private communication between VPCs and AWS services without requiring internet access, making it the best option for regulatory compliance.

Amazon Macie (B): A data security service that helps identify sensitive data but does not provide private connectivity.
Amazon CloudFront (C): A CDN service that optimizes content delivery but still requires internet access.
Internet Gateway (D): This would provide internet access, which is explicitly not allowed per the requirements.
Thus, AWS PrivateLink is the right solution to enable secure, private access to Amazon Bedrock within the VPC.

Selected Answer: A

AWS PrivateLink allows secure and private connectivity to AWS services, such as Amazon Bedrock, without requiring internet access. It enables

you to connect to Amazon Bedrock over a private link within your VPC, ensuring that traffic does not traverse the public internet, which is essential for meeting regulatory compliance standards that prohibit internet traffic.

Selected Answer: A

AWS PrivateLink is the right options to avoid the any internet traffic. IG for internet traffic so we can't use it for this usecase.

Moon 1 year, 3 months ago

Selected Answer: A

A: AWS PrivateLink

Explanation:
AWS PrivateLink is used to securely access AWS services from a VPC without exposing the traffic to the public internet. This ensures compliance with regulatory standards that prohibit internet access, as all communication happens over the private AWS network.
