EXAM AWS CERTIFIED DEVELOPER - ASSOCIATE DVA-C02 TOPIC 1 QUESTIO...

Exam question from Amazon's AWS Certified Developer - Associate DVA-C02
Question #: 125
Topic #: 1
[All AWS Certified Developer - Associate DVA-C02 Questions]

A developer is creating an AWS Serverless Application Model (AWS SAM) template. The AWS SAM template contains the definition of multiple AWS Lambda functions, an Amazon S3 bucket, and an Amazon CloudFront distribution. One of the Lambda functions runs on Lambda@Edge in the CloudFront distribution. The S3 bucket is configured as an origin for the CloudFront distribution.

When the developer deploys the AWS SAM template in the eu-west-1 Region, the creation of the stack fails.

Which of the following could be the reason for this issue?

A. CloudFront distributions can be created only in the us-east-1 Region.

B. Lambda@Edge functions can be created only in the us-east-1 Region.

C. A single AWS SAM template cannot contain multiple Lambda functions.

D. The CloudFront distribution and the S3 bucket cannot be created in the same Region.

Selected Answer: B

https://docs.aws.amazon.com/AmazonCloudFront/latest/DeveloperGuide/edge-functions-restrictions.html

The Lambda function must be in the US East (N. Virginia) Region.

Selected Answer: B

A) Eliminated - CloudFront is a global service that is not tied to a specific region.
When creating a CloudFront distribution, the deployment can originate from any AWS region (e.g., eu-west-1).

B) Correct - Lambda@Edge functions must be deployed in the us-east-1 Region because they are globally replicated and integrated with CloudFront.

Selected Answer: B

SAM can only specify one region
Langda@Edge only in us-east1 region

Selected Answer: C

Option A states that CloudFront distributions can only be created in the us-east-1 Region. This statement is incorrect because CloudFront distributions can be created in various AWS regions, including the eu-west-1 Region.
