EXAM AWS CERTIFIED AI PRACTITIONER AIF-C01 TOPIC 1 QUESTION 28 DIS...

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01
Question #: 28
Topic #: 1
[All AWS Certified AI Practitioner AIF-C01 Questions]

An AI company periodically evaluates its systems and processes with the help of independent software vendors (ISVs). The company needs to receive email message notifications when an ISV's compliance reports become available.
Which AWS service can the company use to meet this requirement?

A. AWS Audit Manager

B. AWS Artifact

C. AWS Trusted Advisor

D. AWS Data Exchange

Selected Answer: B

AWS Artifact allows you to access AWS compliance reports, and it also includes a feature that sends email notifications when new compliance documents become available. This feature directly addresses the company's need to receive notifications when ISV compliance reports are released.
Why other options are incorrect:
A. AWS Audit Manager: While AWS Audit Manager helps with auditing AWS usage, it focuses on internal compliance with AWS controls and regulations, not external ISV compliance.
C. AWS Trusted Advisor: Trusted Advisor provides recommendations for optimizing your AWS resources and cloud environment, but it doesn't offer specific email notifications for ISV compliance reports.
D. AWS Data Exchange: Data Exchange is used for distributing data and content, not for managing or delivering ISV compliance reports.

Selected Answer: D

The answer is D. AWS Data Exchange.

Analysis:

AWS Data Exchange allows enterprises to subscribe to data products provided by third-party vendors (such as independent software vendors ISVs). When these vendors publish updated compliance reports, subscribers can receive notifications (such as via email) to obtain the latest compliance information in a timely manner.

AWS Audit Manager is mainly used to automatically collect audit evidence to help evaluate internal controls;

AWS Artifact mainly provides AWS's own compliance document downloads and is not used to receive ISV report notifications;

AWS Trusted Advisor provides advice on best practices rather than third-party report update notifications.

Selected Answer: A

AWS Data Exchange is not correct as it only provides data products from third-party vendors and not used for compliance reports

Selected Answer: D

The AWS service the company can use to meet this requirement is AWS Data Exchange.
AWS Data Exchange allows organizations to securely discover, subscribe to, and use third-party data, including compliance reports from independent software vendors (ISVs).
It can be configured to provide notifications, including email messages,

when new datasets or compliance reports become available.

While AWS Artifact provides on-demand access to AWS's compliance reports and can notify users when new reports are available, it does not provide access to ISVs' compliance reports

GoWin2509 4 months, 1 week ago

Selected Answer: D

The company wants to receive email notifications when independent software vendors (ISVs) publish new compliance reports.
AWS Data Exchange:
- Subscribe to third-party datasets (including compliance reports).
- Get automatic notifications when new data or updated files are published.
- ISVs commonly publish reports, data feeds, and updates through Data Exchange

Selected Answer: D

AWS Data Exchange allows companies to subscribe to third-party datasets—including compliance reports from independent software vendors (ISVs)—and receive notifications, such as email alerts, when new data becomes available.

Let’s briefly look at why the others don’t fit:
- A. AWS Audit Manager helps assess your own compliance posture, not monitor third-party reports.
- B. AWS Artifact provides access to AWS’s own compliance documents and some ISV reports, but it doesn’t support notification subscriptions for ISV updates.
- C. AWS Trusted Advisor offers best practice recommendations, not compliance report tracking.

Selected Answer: B

Portal that provides customers with on-demand access to AWS compliance documentation and AWS agreements
• Artifact Reports - Allows you to download AWS security and compliance documents from third-party auditors, like AWS ISO certifications, Payment
Card Industry (PCI), and System and Organization Control (SOC) reports
• Artifact Agreements - Allows you to review, accept, and track the status of
AWS agreements such as the Business Associate Addendum (BAA) or the Health Insurance Portability and Accountability Act (HIPAA) for an individual
account or in your organization

Selected Answer: D

However, AWS Artifact is not designed for receiving notifications about third-party compliance reports from ISVs (Independent Software Vendors). Instead, it focuses on AWS's own compliance documentation, which makes it different from services like AWS Data Exchange that facilitate access to third-party data products and notifications about new data availability.

But: With AWS Artifact, you can also download security and compliance documents for independent software vendors (ISVs) who sell their products on AWS Marketplace.
https://docs.aws.amazon.com/artifact/latest/ug/what-is-aws-artifact.html

So B is the answer.

Selected Answer: B

AWS Artifact is the central hub for AWS compliance reports and agreements. It provides access to compliance-related documents, such as third-party audit reports from independent software vendors (ISVs). AWS Artifact can notify users when new compliance reports become available, ensuring that the company stays informed about the latest compliance updates.

yimicc 1 year, 1 month ago

Selected Answer: D

Should be Data Exchange. AWS Artifact only provide the security compliance of AWS inferastructure. Because a 3rd party report is required, so data exchange should be the correct service to use.

Selected Answer: B

AWS Artifact: AWS Artifact is a service that provides on-demand access to AWS's compliance reports, agreements, and certifications. It also supports notifications and enables companies to keep track of their compliance status and related reports. When an ISV's compliance reports are available, AWS Artifact can notify users via email, making it the best choice for this scenario.
