EXAM AWS CERTIFIED DEVELOPER - ASSOCIATE DVA-C02 TOPIC 1 QUESTIO...

Exam question from Amazon's AWS Certified Developer - Associate DVA-C02
Question #: 133
Topic #: 1
[All AWS Certified Developer - Associate DVA-C02 Questions]

A developer needs to store configuration variables for an application. The developer needs to set an expiration date and time for the configuration. The developer wants to receive notifications before the configuration expires.

Which solution will meet these requirements with the LEAST operational overhead?

A. Create a standard parameter in AWS Systems Manager Parameter Store. Set Expiration and ExpirationNotification policy types.

B. Create a standard parameter in AWS Systems Manager Parameter Store. Create an AWS Lambda function to expire the configuration and to send Amazon Simple Notification Service (Amazon SNS) notifications.

C. Create an advanced parameter in AWS Systems Manager Parameter Store. Set Expiration and ExpirationNotification policy types.

D. Create an advanced parameter in AWS Systems Manager Parameter Store. Create an Amazon EC2 instance with a cron job to expire the configuration and to send notifications.

Selected Answer: C

C is correct.
You have to use "advanced parameter in AWS Systems Manager Parameter Store" to be able to Set Expiration and ExpirationNotification policy types.

no, Standard Parameters: These are the default tier for Parameter Store. They have a content size limit of 4 KB and a maximum of 10,000 parameters per Region. They are free of charge.
Advanced Parameters: These offer additional features for a cost, including:
Larger content size limit (8 KB).
Increased parameter quota (100,000 per Region).
Support for parameter policies, such as Expiration, ExpirationNotification, and NoChangeNotification.

Selected Answer: C

it leverages the advanced parameter tier and the parameter policies feature of Parameter Store, which meet the requirements with the least operational overhead.
