EXAM AWS CERTIFIED AI PRACTITIONER AIF-C01 TOPIC 1 QUESTION 51 DIS...

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01

Question #: 51

Topic #: 1

[All AWS Certified AI Practitioner AIF-C01 Questions]

A company needs to choose a model from Amazon Bedrock to use internally. The company must identify a model that generates responses in a style that the company's employees prefer.
What should the company do to meet these requirements?

A. Evaluate the models by using built-in prompt datasets.

B. Evaluate the models by using a human workforce and custom prompt datasets.

C. Use public model leaderboards to identify the model.

D. Use the model InvocationLatency runtime metrics in Amazon CloudWatch when trying models.

Selected Answer: B

A melhor opção seria B. Avalie os modelos usando uma força de trabalho humana e conjuntos de dados de prompt personalizados.

Essa abordagem permite que a empresa teste os modelos de forma prática e obtenha feedback direto dos funcionários, garantindo que as respostas geradas estejam alinhadas com o estilo preferido. A avaliação humana ajuda a identificar nuances na linguagem e na tonalidade das respostas, tornando a escolha do modelo mais precisa.

Selected Answer: B

A melhor opção seria D. Conceda acesso ao modelo personalizado no Amazon Bedrock.
O Amazon Bedrock permite que empresas utilizem modelos básicos e personalizem modelos para casos de uso específicos.
Para que a empresa possa usar o modelo treinado, ela deve garantir que o modelo personalizado esteja acessível dentro do Bedrock.
Dessa forma, ele pode ser utilizado para inferências e integração com aplicações.

Selected Answer: B

B. Evaluate the models by using a human workforce and custom prompt datasets: This approach ensures that the evaluation is tailored to the company's specific needs. By using a human workforce to test how the models generate responses and customizing the prompt datasets, the company can assess how well the model aligns with the style that their employees prefer. This is the most effective method for evaluating and selecting a model based on the desired output style.

Selected Answer: B

B: Evaluate the models by using a human workforce and custom prompt datasets.

Explanation:
To determine which model generates responses in the style that the company's employees prefer, the company should evaluate the models using custom prompt datasets relevant to their specific use cases. Additionally, involving a human workforce ensures subjective aspects, like tone, style, and alignment with employee preferences, are effectively assessed.
