Selected Answer: U

A resposta correta é A. Implemente APIs de moderação.

As APIs de moderação são essenciais para garantir que o chatbot não exiba imagens inadequadas ou indesejadas. Essas APIs analisam o conteúdo das imagens antes de serem retornadas e aplicam filtros para bloquear conteúdos explícitos, ofensivos ou que não estejam alinhados com as diretrizes da empresa.

Selected Answer: A

A. Implement moderation APIs: Moderation APIs can help screen the content generated by the chatbot to ensure that inappropriate or unwanted images are not returned to users. These APIs can identify and filter out offensive, explicit, or harmful content before it's shown to the user. This is the most direct and effective way to ensure content is appropriate.

Selected Answer: A

A: Implement moderation APIs.

Explanation:
Moderation APIs are designed to detect and filter inappropriate or unwanted content, such as images, text, or videos. By integrating moderation APIs into the chatbot workflow, the company can screen and block inappropriate images before they are returned to users. This ensures compliance with ethical standards and avoids exposing users to harmful or unwanted content.

Selected Answer: A

Amazon Rekognition moderation APIs can help you automatically identify and filter inappropriate content in images and videos, reducing the need for manual human review. This can significantly improve efficiency and reduce costs while maintaining high standards of content moderation. For details, please refer to the following document:
https://docs.aws.amazon.com/rekognition/latest/dg/moderation.html

Selected Answer: A

Moderation APIs are designed to filter and flag inappropriate or unwanted content, ensuring that the chatbot does not return harmful or unsuitable images. These APIs can scan images before they are returned to the user and block or flag any content that violates the company's guidelines.

A. Implement moderation APIs.

Moderation APIs can help filter out inappropriate or unwanted images by analyzing and moderating content before it is returned to users. This ensures that the chatbot maintains safe and appropriate interactions, reducing the risk of inappropriate images being shown.
