EXAM AWS CERTIFIED AI PRACTITIONER AIF-C01 TOPIC 1 QUESTION 79 DIS...

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01

Question #: 79

Topic #: 1

[All AWS Certified AI Practitioner AIF-C01 Questions]

A company has built a solution by using generative AI. The solution uses large language models (LLMs) to translate training manuals from English into other languages. The company wants to evaluate the accuracy of the solution by examining the text generated for the manuals.

Which model evaluation strategy meets these requirements?

A. Bilingual Evaluation Understudy (BLEU)

B. Root mean squared error (RMSE)

C. Recall-Oriented Understudy for Gisting Evaluation (ROUGE)

D. F1 score

Selected Answer: U

Métrica Uso Principal
BLEU ✅ Tradução de texto (Machine Translation)
ROUGE Resumo de texto (Text Summarization)
RMSE Modelos de regressão
F1 Score Classificação

Selected Answer: A

BLEU (Bilingual Evaluation Understudy) score is a metric specifically designed for evaluating the quality of machine-generated translations by comparing them to one or more human-produced reference translations. BLEU is particularly useful for measuring the accuracy of translations, which is exactly what the company needs to evaluate in this scenario.

Selected Answer: A

A. Bilingual Evaluation Understudy (BLEU): This is the correct answer. BLEU is a common metric for evaluating machine translation quality. It compares the generated text to one or more reference translations and measures the n-gram overlap.

Selected Answer: C

C. Recall-Oriented Understudy for Gisting Evaluation (ROUGE)

ROUGE is a popular metric for evaluating the quality of text summarization and machine translation systems. It focuses on recall, measuring how well the generated text covers the relevant information from the reference text. In this case, ROUGE can be used to assess how accurately the LLM-generated translations capture the meaning and content of the original English manuals.

Selected Answer: A

BLEU (bilingual evaluation understudy) is an algorithm for evaluating the quality of text which has been machine-translated from one natural language to another.
