EXAM AWS CERTIFIED AI PRACTITIONER AIF-C01 TOPIC 1 QUESTION 80 DIS...

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01

Question #: 80

Topic #: 1

[All AWS Certified AI Practitioner AIF-C01 Questions]

A large retailer receives thousands of customer support inquiries about products every day. The customer support inquiries need to be processed and responded to quickly. The company wants to implement Agents for Amazon Bedrock.

What are the key benefits of using Amazon Bedrock agents that could help this retailer?

A. Generation of custom foundation models (FMs) to predict customer needs

B. Automation of repetitive tasks and orchestration of complex workflows

C. Automatically calling multiple foundation models (FMs) and consolidating the results

D. Selecting the foundation model (FM) based on predefined criteria and metrics

Selected Answer: B

B. Main advantage of using Amazon Bedrock Agent is the automation of repetitive tasks and the orchestration of complex workflows. Customer support inquiries are often patterned and repetitive. By using Amazon Bedrock Agent, you can automate the initial response to such routine inquiries and information gathering. In addition, even in cases where the workflow is somewhat complex and the response required varies depending on the inquiry content, Amazon Bedrock can flexibly respond by combining multiple AI models. This will enable quick and accurate customer support while optimally utilizing human resources. It will lead to efficient processing of large volumes of inquiries, which will lead to improved customer satisfaction.

Selected Answer: B

A melhor opção para esse varejista seria B. Automação de tarefas repetitivas e orquestração de fluxos de trabalho complexos.

Os Agents for Amazon Bedrock são projetados para ajudar empresas a lidar com interações de clientes de forma escalável e eficiente. Ao automatizar tarefas repetitivas, os agentes podem responder rapidamente a perguntas frequentes, processar solicitações de suporte e coordenar fluxos de trabalho mais complexos, como a busca de informações em bancos de dados ou o encaminhamento de casos para atendentes humanos quando necessário.

Selected Answer: B

Amazon Bedrock agents are designed to help automate and manage complex workflows, such as orchestrating multiple tasks and interacting with other systems, making them particularly suitable for automating repetitive tasks. In the case of the retailer, this would help in efficiently processing customer support inquiries and responding to them quickly.

Selected Answer: B

Amazon Bedrock agents are specifically designed to automate tasks and orchestrate workflows
They can handle repetitive customer support inquiries efficiently
They can break down complex customer requests into smaller steps and execute them in sequence
This directly addresses the retailer's need to process thousands of inquiries quickly

Selected Answer: C

A. Generation of custom foundation models (FMs) to predict customer needs
While creating custom FMs could be valuable for tailored predictions, Amazon Bedrock agents themselves focus on automating workflows and orchestrating the use of multiple FMs, rather than creating custom models.

B. Automation of repetitive tasks and orchestration of complex workflows
This is a strong benefit of Amazon Bedrock agents, but option C more directly addresses the use case of consolidating results from multiple FMs to handle customer inquiries.

D. Selecting the foundation model (FM) based on predefined criteria and metrics
While selecting models based on criteria is possible, the primary strength of Bedrock agents in this context is in automating the calling of multiple models and consolidating their responses.

Selected Answer: C

C is correct answer. Repetitive task may not work on customer support inquiry as each inquiry is different.
