EXAM AWS CERTIFIED DEVELOPER - ASSOCIATE DVA-C02 TOPIC 1 QUESTIO...

Exam question from Amazon's AWS Certified Developer - Associate DVA-C02
Question #: 176
Topic #: 1
[All AWS Certified Developer - Associate DVA-C02 Questions]

When a developer tries to run an AWS CodeBuild project, it raises an error because the length of all environment variables exceeds the limit for the combined maximum of characters.

What is the recommended solution?

A. Add the export LC_ALL="en_US.utf8" command to the pre_build section to ensure POSIX localization.

B. Use Amazon Cognito to store key-value pairs for large numbers of environment variables.

C. Update the settings for the build project to use an Amazon S3 bucket for large numbers of environment variables.

D. Use AWS Systems Manager Parameter Store to store large numbers of environment variables.

Selected Answer: D

AWS Systems Manager Parameter Store is specifically designed for managing configuration data and secrets. It can store large numbers of parameters, including environment variables, and makes them easily accessible and manageable. It also provides features like versioning, fine-grained access control, and integration with AWS Identity and Access Management (IAM).
