EXAM AWS CERTIFIED AI PRACTITIONER AIF-C01 TOPIC 1 QUESTION 83 DIS...

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01

Question #: 83

Topic #: 1

[All AWS Certified AI Practitioner AIF-C01 Questions]

A company wants to assess the costs that are associated with using a large language model (LLM) to generate inferences. The company wants to use Amazon Bedrock to build generative AI applications. Which factor will drive the inference costs?

A. Number of tokens consumed

B. Temperature value

C. Amount of data used to train the LLM

D. Total training time

Selected Answer: A

In the context of using Amazon Bedrock and generative AI models, inference costs are typically driven by the number of tokens consumed during the input and output processing.

Number of tokens consumed refers to how many tokens (words, subwords, characters) the model processes during inference (both input and output). More tokens mean higher processing and hence higher costs.

Selected Answer: A

A. Number of tokens consumed. More tokens used = higher cost.

All other affects training costs, not inference costs. Correct answer is A

Selected Answer: A

No. of tokens consumed while processing. Tokens are the basic units of input and output that a generative AI model operates on, representing words, subwords, or other linguistic units.
