EXAM AWS CERTIFIED AI PRACTITIONER AIF-C01 TOPIC 1 QUESTION 84 DIS...

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01
Question #: 84
Topic #: 1
[All AWS Certified AI Practitioner AIF-C01 Questions]

A company is using Amazon SageMaker Studio notebooks to build and train ML models. The company stores the data in an Amazon S3 bucket. The company needs to manage the flow of data from Amazon S3 to SageMaker Studio notebooks.
Which solution will meet this requirement?

A. Use Amazon Inspector to monitor SageMaker Studio.

B. Use Amazon Macie to monitor SageMaker Studio.

C. Configure SageMaker to use a VPC with an S3 endpoint.

D. Configure SageMaker to use S3 Glacier Deep Archive.

Selected Answer: C

To manage the flow of data from Amazon S3 to SageMaker Studio notebooks securely and efficiently, configuring SageMaker to use a VPC (Virtual Private Cloud) with an S3 endpoint is the best solution. This setup ensures that data transfer between SageMaker and S3 happens within the AWS network, without going through the public internet, which improves security and performance.

S3 VPC endpoint: An S3 VPC endpoint allows secure, private access to Amazon S3 from resources in your VPC, enabling SageMaker to securely retrieve data stored in S3 buckets without leaving the AWS network. This setup helps manage data flow efficiently.
