EXAM AWS CERTIFIED AI PRACTITIONER AIF-C01 TOPIC 1 QUESTION 85 DIS...

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01

Question #: 85

Topic #: 1

[All AWS Certified AI Practitioner AIF-C01 Questions]

A company has a foundation model (FM) that was customized by using Amazon Bedrock to answer customer queries about products. The company wants to validate the model's responses to new types of queries. The company needs to upload a new dataset that Amazon Bedrock can use for validation. Which AWS service meets these requirements?

A. Amazon S3

B. Amazon Elastic Block Store (Amazon EBS)

C. Amazon Elastic File System (Amazon EFS)

D. AWS Snowcone

Selected Answer: U

A resposta correta é A. Amazon S3.

O Amazon S3 é o serviço ideal para armazenar e disponibilizar conjuntos de dados que podem ser usados na validação do modelo do Amazon Bedrock. Ele permite que a empresa faça upload dos dados de teste, garantindo escalabilidade, segurança e fácil integração com outros serviços da AWS.

Selected Answer: A

Amazon S3 (Simple Storage Service) is the ideal solution for storing datasets that will be used by Amazon Bedrock for model validation. It is a scalable, durable, and secure storage service that is commonly used to store large datasets, including those used for machine learning model training, validation, and inference.

In the case of Amazon Bedrock, the company would typically upload the new validation dataset to an S3 bucket, which can then be accessed by Bedrock to validate the model's responses against the new data.
