EXAM AWS CERTIFIED AI PRACTITIONER AIF-C01 TOPIC 1 QUESTION 88 DIS...

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01

Question #: 88

Topic #: 1

[All AWS Certified AI Practitioner AIF-C01 Questions]

A social media company wants to use a large language model (LLM) to summarize messages. The company has chosen a few LLMs that are available on Amazon SageMaker JumpStart. The company wants to compare the generated output toxicity of these models.

Which strategy gives the company the ability to evaluate the LLMs with the LEAST operational overhead?

A. Crowd-sourced evaluation

B. Automatic model evaluation

C. Model evaluation with human workers

D. Reinforcement learning from human feedback (RLHF)

Selected Answer: B

B is the correct answer

upvoted 1 times

Rcosmos 11 months, 2 weeks ago

Selected Answer: C

Explicação:
A avaliação automática do modelo permite à empresa analisar rapidamente a saída de diferentes LLMs quanto à toxicidade, usando métricas computacionais padronizadas, como classificadores de linguagem tóxica.

Essa abordagem:

Reduz drasticamente a sobrecarga operacional,

É escalável,

Não depende de revisão humana manual,

Pode ser integrada diretamente ao pipeline de avaliação via SageMaker ou outros serviços como Amazon Comprehend ou APIs de moderação.

Selected Answer: B

Automatic model evaluation provides a way to assess the generated output of large language models (LLMs) with minimal operational overhead. This can be done by using pre-built toxicity evaluation tools or integrating models that can automatically detect and score toxicity in the generated text. This method saves time and resources compared to manual evaluation or more complex processes.

Selected Answer: B

The correct answer is B. Automatic model evaluation requires minimal human intervention, making it operationally lighter than human-based approaches.

Selected Answer: B

B. Automatic model evaluation

Explanation:
Using automatic model evaluation is the most efficient and low-overhead approach to evaluate the toxicity of the generated outputs from different LLMs. This strategy involves using automated tools or frameworks designed to assess the toxicity, bias, or other quality metrics of the model outputs, which minimizes operational overhead compared to manual methods.

Selected Answer: B

automatic model evlauation

Automatic model evaluation refers to the process of assessing the performance of a machine learning model using predefined metrics and techniques without manual intervention. This process is crucial for understanding how well a model performs and identifying areas for improvement. Here are some key components and methods used in automatic model evaluation:
