EXAM AWS CERTIFIED AI PRACTITIONER AIF-C01 TOPIC 1 QUESTION 89 DIS...

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01

Question #: 89

Topic #: 1

[All AWS Certified AI Practitioner AIF-C01 Questions]

A company is testing the security of a foundation model (FM). During testing, the company wants to get around the safety features and make harmful content.

Which security technique is this an example of?

A. Fuzzing training data to find vulnerabilities

B. Denial of service (DoS)

C. Penetration testing with authorization

D. Jailbreak

Selected Answer: D

Explicação:
Jailbreak é uma técnica usada para burlar ou contornar as restrições de segurança impostas a um modelo de linguagem (como filtros de conteúdo ou limites de comportamento). O objetivo é fazer com que o modelo gere respostas que normalmente seriam bloqueadas, como conteúdo prejudicial, ofensivo ou perigoso.

Esse tipo de teste é comum em avaliações de segurança de LLMs, especialmente em ambientes controlados de validação e pesquisa.

Selected Answer: D

Jailbreaking refers to bypassing or disabling the security restrictions placed on a system—in this case, a foundation model (FM)—to make the system behave in unintended ways, often to produce harmful or malicious content. In the context of AI, jailbreaking typically involves manipulating the model's behavior or output by exploiting vulnerabilities in its design or safety features.

Selected Answer: D

The correct answer is D. A jailbreak is an attempt to bypass an AI model's built-in safety controls.

Selected Answer: D

D. Jailbreak

Explanation:
Jailbreaking is a technique used to bypass the safety features and restrictions of a foundation model (FM). The goal is to manipulate the model into generating harmful, inappropriate, or otherwise unintended content, despite the safeguards in place. This is often done to test the robustness of the model's safety mechanisms.

Selected Answer: D

ML Jailbreak security
ML jailbreak refers to techniques used to bypass the safety and security measures of machine learning models, particularly large language models (LLMs). This can lead to the model producing harmful, inappropriate, or unintended content1. Here are some key points about ML jailbreak security
