Exam question from Amazon's AWS Certified Developer - Associate DVA-C02

Question #: 193

Topic #: 1

[All AWS Certified Developer - Associate DVA-C02 Questions]

A developer is creating a mobile application that will not require users to log in.

What is the MOST efficient method to grant users access to AWS resources?

A. Use an identity provider to securely authenticate with the application.

B. Create an AWS Lambda function to create an IAM user when a user accesses the application.

C. Create credentials using AWS KMS and apply these credentials to users when using the application.

D. Use Amazon Cognito to associate unauthenticated users with an IAM role that has limited access to resources.

Selected Answer: D

Amazon Cognito allows you to create unique identities for users of your application and assign permissions to these identities using IAM roles. By using Cognito's unauthenticated identities (also known as guest users), you can grant limited AWS resource access to users without requiring them to log in. This approach is secure, scalable, and does not require managing user credentials.

Selected Answer: D

Amazon Cognito is designed to handle user identity and access management for mobile and web applications
