EXAM AWS CERTIFIED AI PRACTITIONER AIF-C01 TOPIC 1 QUESTION 101 DI...

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01

Question #: 101

Topic #: 1

[All AWS Certified AI Practitioner AIF-C01 Questions]

A company is developing an ML model to make loan approvals. The company must implement a solution to detect bias in the model. The company must also be able to explain the model's predictions.

Which solution will meet these requirements?

A. Amazon SageMaker Clarify

B. Amazon SageMaker Data Wrangler

C. Amazon SageMaker Model Cards

D. AWS AI Service Cards

Selected Answer: A

Sagemaker Clarify. But here's how you think about it. Think of a dataset as a big Excel sheet. It's made up of columns and rows. A model uses the all but one of the columns to explain the value in the last column. So if you want clarity on how it works, you might need to understand how the columns predict the last column (model explainability / feature attribution), and also if the rows have enough data for each subgroup (fairness / bias). tl;dr - Sagemaker Clarify will clarify how the columns and rows fit the model.

Selected Answer: A

Amazon SageMaker Clarify provides both bias detection and model explainability features, making it the most suitable choice for detecting bias in a loan approval model and explaining its predictions.
