EXAM AWS CERTIFIED AI PRACTITIONER AIF-C01 TOPIC 1 QUESTION 108 DI...

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01

Question #: 108

Topic #: 1

[All AWS Certified AI Practitioner AIF-C01 Questions]

A company wants to use a large language model (LLM) to generate concise, feature-specific descriptions for the company's products.

Which prompt engineering technique meets these requirements?

A. Create one prompt that covers all products. Edit the responses to make the responses more specific, concise, and tailored to each product.

B. Create prompts for each product category that highlight the key features. Include the desired output format and length for each prompt response.

C. Include a diverse range of product features in each prompt to generate creative and unique descriptions.

D. Provide detailed, product-specific prompts to ensure precise and customized descriptions.

Selected Answer: B

This approach ensures that the prompts are tailored to specific product categories, guiding the LLM to generate concise, feature-specific descriptions. Including the desired output format and length further refines the model's responses, making them consistent and aligned with the company's requirements.

Selected Answer: D

Option B: Creating prompts for each product category can help highlight key features, but it may still result in more generalized descriptions. This approach might not capture the unique aspects of each individual product as effectively as a detailed, product-specific prompt.

Option D: By providing detailed, product-specific prompts, you ensure that the descriptions are tailored to each product's unique features. This method minimizes the need for further editing and ensures that the output is concise and highly relevant.

In summary, while Option B is useful for generating category-specific descriptions, Option D offers a higher level of precision and customization for individual products.

Selected Answer: B

Option B offers the best strategy for generating concise, feature-specific descriptions, as it targets the key features for each product category and provides clear instructions on the format and length of the output.

Selected Answer: B

Create prompts for each product category that highlight the key features. Include the desired output format and length for each prompt response.

By creating tailored prompts for each product category and specifying the key features along with the desired output format and length, the company can ensure that the generated descriptions are specific, concise, and relevant to each product. This approach balances the need for customization with efficiency.
