Exam question from Amazon's AWS Certified AI Practitioner AIF-C01

Question #: 112

Topic #: 1

[All AWS Certified AI Practitioner AIF-C01 Questions]

A pharmaceutical company wants to analyze user reviews of new medications and provide a concise overview for each medication.

Which solution meets these requirements?

A. Create a time-series forecasting model to analyze the medication reviews by using Amazon Personalize.

B. Create medication review summaries by using Amazon Bedrock large language models (LLMs).

C. Create a classification model that categorizes medications into different groups by using Amazon SageMaker.

D. Create medication review summaries by using Amazon Rekognition.

Selected Answer: B

A melhor opção para esse caso é B. Criar resumos de revisão de medicamentos usando modelos de linguagem grande (LLMs) do Amazon Bedrock.

Os LLMs são projetados para processar grandes volumes de texto e gerar resumos concisos e informativos. Eles podem identificar padrões nas avaliações dos usuários e sintetizar informações-chave sobre cada medicamento, tornando a análise mais eficiente e acessível.

Selected Answer: B

Create medication review summaries by using Amazon Bedrock large language models (LLMs).

Amazon Bedrock LLMs are designed for natural language processing tasks, including text summarization. They can effectively generate concise and coherent summaries from the text, making them ideal for summarizing user reviews of medications.
