Exam question from Amazon's AWS Certified Developer - Associate DVA-C02

Question #: 224

Topic #: 1

[All AWS Certified Developer - Associate DVA-C02 Questions]

A web application is using Amazon Kinesis Data Streams for clickstream data that may not be consumed for up to 12 hours.

How can the developer implement encryption at rest for data within the Kinesis Data Streams?

A. Enable SSL connections to Kinesis.

B. Use Amazon Kinesis Consumer Library.

C. Encrypt the data once it is at rest with a Lambda function.

D. Enable server-side encryption in Kinesis Data Streams.

Selected Answer: D

D. Enable server-side encryption in Kinesis Data Streams.

Amazon Kinesis Data Streams allows you to enable server-side encryption, which encrypts data at rest. This ensures that data stored within the Kinesis Data Streams is protected with encryption.
