Selected Answer: D

This service is specifically designed for real-time processing of large-scale streaming data. Kinesis Data Streams allows multiple consumers to process the same stream concurrently, making it highly suitable for scenarios where you have high-volume data streams that need to be processed in real-time by various applications. It offers high throughput, scalability, and durability for streaming data, and enables multiple applications to process the same stream concurrently, making it the most cost-effective and efficient choice for this scenario.
