## EXAM AWS CERTIFIED AI PRACTITIONER AIF-C01 TOPIC 1 QUESTION 124 DI...

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01

Question #: 124

Topic #: 1

[All AWS Certified AI Practitioner AIF-C01 Questions]

---

A bank has fine-tuned a large language model (LLM) to expedite the loan approval process. During an external audit of the model, the company discovered that the model was approving loans at a faster pace for a specific demographic than for other demographics.

How should the bank fix this issue MOST cost-effectively?

A. Include more diverse training data. Fine-tune the model again by using the new data.

B. Use Retrieval Augmented Generation (RAG) with the fine-tuned model.

C. Use AWS Trusted Advisor checks to eliminate bias.

D. Pre-train a new LLM with more diverse training data.

Selected Answer: A

Should be A

upvoted 1 times

**65703c1** 8 months ago

Selected Answer: A

A is the correct answer

upvoted 2 times

**Rcosmos** 10 months, 1 week ago

Selected Answer: B

A resposta correta é A. Inclua dados de treinamento mais diversificados. Ajuste o modelo novamente usando os novos dados.

Essa abordagem é a mais econômica, pois evita o custo elevado de treinar um novo LLM do zero. O problema identificado é um viés no modelo, causado provavelmente por um conjunto de dados inicial que não representava adequadamente todos os grupos demográficos. A solução é incorporar dados mais diversificados, garantindo que diferentes perfis estejam equilibradamente representados no treinamento. Em seguida, o banco pode ajustar o modelo novamente para melhorar suas decisões e reduzir vieses.

Selected Answer: B

Why not B?
Question says: MOST cost-effective

upvoted 2 times

**Jessiii** 1 year, 1 month ago

Selected Answer: A

The model's bias likely stems from unrepresentative training data. Adding more diverse data and fine-tuning the model is the most cost-effective solution to address bias.

Selected Answer: A

The correct answer is A. Fine-tuning with more diverse data is the most cost-effective bias mitigation approach.

Selected Answer: A

A. Include more diverse training data. Fine-tune the model again by using the new data.

Explanation:

The issue of bias in the loan approval model likely arises from the model being trained on data that does not sufficiently represent all demographics. To address this, the bank should augment the training dataset with more diverse data to ensure that the model can learn to make fair and equitable decisions across different demographics. After

incorporating the more diverse training data, the bank can fine-tune the model again to adjust its behavior and reduce any biases identified during the audit.
