EXAM AWS CERTIFIED AI PRACTITIONER AIF-C01 TOPIC 1 QUESTION 126 DI...

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01

Question #: 126

Topic #: 1

[All AWS Certified AI Practitioner AIF-C01 Questions]

A company needs to log all requests made to its Amazon Bedrock API. The company must retain the logs securely for 5 years at the lowest possible cost.

Which combination of AWS service and storage class meets these requirements? (Choose two.)

A. AWS CloudTrail

B. Amazon CloudWatch

C. AWS Audit Manager

D. Amazon S3 Intelligent-Tiering

E. Amazon S3 Standard

Selected Answer: AD

A. AWS CloudTrail Essential for logging API requests to Amazon Bedrock and other AWS services.
D. Amazon S3 Intelligent-Tiering This storage class automatically moves data between two access tiers (frequent and infrequent) based on access patterns. This is ideal when you expect to access the logs occasionally but need to retain them securely and at a lower cost over time.

Selected Answer: AD

A: AWS CloudTrail
D: Amazon S3 Intelligent-Tiering

Explanation:
A: AWS CloudTrail:
AWS CloudTrail records all API calls made to AWS services, including Amazon Bedrock, and provides detailed logs of these interactions. It is the primary service for tracking and logging API requests.
D: Amazon S3 Intelligent-Tiering:
Amazon S3 Intelligent-Tiering is a cost-effective storage class designed to optimize costs for data with unknown or changing access patterns. It automatically moves data between frequent and infrequent access tiers based on usage, ensuring cost efficiency while meeting long-term retention requirements.
