Selected Answer: U

A opção correta para monitorar o desempenho dos sistemas de aprendizado de máquina (ML) em um ambiente altamente escalável da AWS é Amazon CloudWatch (A).
O Amazon CloudWatch fornece métricas, logs e alarmes para monitorar recursos da AWS, incluindo instâncias de ML.
Ele ajuda a identificar problemas, otimizar desempenho e garantir que os modelos operem conforme esperado.
Os outros serviços têm propósitos diferentes:
AWS CloudTrail (B): Registra eventos e chamadas de API para auditoria e segurança.
AWS Trusted Advisor (C): Fornece recomendações de boas práticas para otimização de custos e segurança.
AWS Config (D): Monitora e gerencia configurações de recursos da AWS.
