EXAM AWS CERTIFIED AI PRACTITIONER AIF-C01 TOPIC 1 QUESTION 139 DI...

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01

Question #: 139

Topic #: 1

[All AWS Certified AI Practitioner AIF-C01 Questions]

A company's large language model (LLM) is experiencing hallucinations.

How can the company decrease hallucinations?

A. Set up Agents for Amazon Bedrock to supervise the model training.

B. Use data pre-processing and remove any data that causes hallucinations.

C. Decrease the temperature inference parameter for the model.

D. Use a foundation model (FM) that is trained to not hallucinate.

Selected Answer: C

C is the correct answer
Note: Data preprocessing can help reduce hallucinations, but it’s not a silver bullet, therefore not an answer.

this is how you decrease the hallucinations

C. Decrease the temperature inference parameter for the model.

C is the correct answer. Here's why:

Decreasing the temperature parameter makes the model's outputs more deterministic and conservative, reducing the likelihood of hallucinations.

Selected Answer: C

The temperature parameter controls the randomness of the model's output. Lowering the temperature makes the model's responses more deterministic and focused, reducing the likelihood of generating incorrect or nonsensical information (hallucinations).

Selected Answer: C

Decreasing the temperature reduces the variety of answer and forcing the model to focus on the tuned patterns
