EXAM AWS CERTIFIED AI PRACTITIONER AIF-C01 TOPIC 1 QUESTION 161 DI...

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01

Question #: 161

Topic #: 1

[All AWS Certified AI Practitioner AIF-C01 Questions]

An airline company wants to build a conversational AI assistant to answer customer questions about flight schedules, booking, and payments. The company wants to use large language models (LLMs) and a knowledge base to create a text-based chatbot interface.

Which solution will meet these requirements with the LEAST development effort?

A. Train models on Amazon SageMaker Autopilot.

B. Develop a Retrieval Augmented Generation (RAG) agent by using Amazon Bedrock.

C. Create a Python application by using Amazon Q Developer.

D. Fine-tune models on Amazon SageMaker Jumpstart.

Selected Answer: B

1. Amazon Bedrock provides fully managed access to foundation models (like Anthropic Claude or Amazon Titan) without needing to train or fine-tune.
2 With RAG, you can connect these models to your knowledge base (e.g., flight schedules, booking policies) to generate accurate, context-aware responses.
3 Bedrock supports agents, which can orchestrate workflows, call APIs (like payment systems), and handle multi-turn conversations—perfect for a chatbot.
4 It's serverless, scalable, and integrates easily with other AWS services like Lambda, S3, and OpenSearch.

Selected Answer: B

Amazon Bedrock is a fully managed service that offers a choice of high-performing Foundation Models (FMs) and provides capabilities to build generative AI applications with security and privacy. Amazon Bedrock Agents specifically helps you build generative AI applications that can run multi-step tasks across company systems and data sources, simplifying the process of building conversational AI applications.

Selected Answer: U

Amazon Bedrock permite usar LLMs prontos (como Anthropic Claude, AI21, Meta, etc.) sem necessidade de treinar ou ajustar modelos manualmente. A abordagem RAG (Retrieval-Augmented Generation) permite:

Integrar os modelos de linguagem com bases de conhecimento externas, como FAQs, documentos, bases de dados de voos, etc.

Fornecer respostas precisas e atualizadas com base nos dados da empresa.

Reduzir drasticamente o esforço de desenvolvimento, pois não exige ajuste fino, nem infraestrutura para treinar modelos.

Com Bedrock + RAG, é possível construir um chatbot poderoso, seguro e conectado aos dados corporativos com mínimo código.
