EXAM AWS CERTIFIED DEVELOPER - ASSOCIATE DVA-C02 TOPIC 1 QUESTIO...

Exam question from Amazon's AWS Certified Developer - Associate DVA-C02
Question #: 257
Topic #: 1
[All AWS Certified Developer - Associate DVA-C02 Questions]

A developer is building an application that will use an Amazon API Gateway API with an AWS Lambda backend. The team that will develop the frontend requires immediate access to the API endpoints to build the UI. To prepare the backend application for integration, the developer needs to set up endpoints. The endpoints need to return predefined HTTP status codes and JSON responses for the frontend team. The developer creates a method for an API resource.

Which solution will meet these requirements?

A. Set the integration type to AWS_PROXY. Provision Lambda functions to return hardcoded JSON data.

B. Set the integration type to MOCK. Configure the method's integration request and integration response to associate a JSON responses with specific HTTP status codes.

C. Set the integration type to HTTP_PROXY. Configure API Gateway to pass all requests to an external placeholder API. which the team will build.

D. Set the integration type to MOCK. Use a method request to define HTTP status codes. Use an integration request to define JSON responses.

Selected Answer: B

Client → Method Request (validate input + auth) → Integration Request → Backend
Backend → Integration Response (map body + status) → Method Response → Client

MOCK = define response in Integration Response, no backend needed.
