Selected Answer: B

Amazon Bedrock Guardrails states that content filters support: Hate, Insults, Sexual, Violence, and Misconduct words and conversations In order to prevent politically influenced ideas, you would need to use Denied Topics. Documentation for Denied Topics states: You can specify a set of denied topics in a guardrail that are undesirable in the context of your generative AI application.

Selected Answer: D

In Amazon Bedrock, content filters are designed to detect and filter undesirable or unsafe model outputs, including:

Political persuasion or biased viewpoints

Hate, harassment, or extremist content

Other categories of potentially harmful or inappropriate content

This makes content filters the right guardrail to identify and prevent politically influenced ideas from appearing in generated newsletters.

Selected Answer: D

This is about political influence, which is exactly what Amazon Bedrock's content filters are designed to detect and block (e.g., political persuasion, hate, sexual content, violence).

Selected Answer: B

B. Denied topics allow you to explicitly define and block specific subjects, such as politics, by setting custom topic restrictions within your application
