Selected Answer: C

C. Providing the ability to mathematically compare texts

Wrong Ans:
A. Splitting text into manageable pieces → That's chunking.

B. Grouping characters as a single unit → That's tokenization.
D. Count of every word in the input → That's the bag-of-words method.

Selected Answer: C

C. Providing the ability to mathematically compare texts

The other options are incorrect because:
A. Splitting text into manageable pieces is related to chunking or tokenization, not embeddings.
B. Grouping characters as a single unit relates to tokenization or subword units.
D. Counting every word is related to bag-of-words models or frequency counts, not embeddings.
