EXAM AWS CERTIFIED AI PRACTITIONER AIF-C01 TOPIC 1 QUESTION 196 DI...

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01

Question #: 196

Topic #: 1

[All AWS Certified AI Practitioner AIF-C01 Questions]

Which metric is used to evaluate the performance of foundation models (FMs) for text summarization tasks?

A. F1 score

B. Bilingual Evaluation Understudy (BLEU) score

C. Accuracy

D. Mean squared error (MSE)

Selected Answer: B

B. Bilingual Evaluation Understudy (BLEU) score
BLEU quantifies the quality of generated text by measuring the n-gram overlap precision between the machine-generated summary and one or more human-written reference summaries. It applies a brevity penalty to account for overly short outputs and provides a quantitative similarity measure, making it suitable for evaluating summarization quality.

Selected Answer: B

For text summarization tasks, the goal is to evaluate how closely the model-generated summary matches a human-written summary. The BLEU score is commonly used in:

Text summarization

Machine translation

Other natural language generation (NLG) tasks

It measures n-gram overlap between the model output and one or more reference texts.

Why not the others?
A. F1 score – Typically used in classification tasks, especially for imbalanced datasets.

C. Accuracy – Used for classification, not suitable for evaluating the quality of generated text.

D. Mean squared error (MSE) – Used in regression tasks, not text generation.
