EXAM AWS CERTIFIED AI PRACTITIONER AIF-C01 TOPIC 1 QUESTION 224 DI...

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01

Question #: 224

Topic #: 1

[All AWS Certified AI Practitioner AIF-C01 Questions]

An AI practitioner wants to generate more diverse and more creative outputs from a large language model (LLM).

How should the AI practitioner adjust the inference parameter?

A. Increase the temperature value.

B. Decrease the Top K value.

C. Increase the response length.

D. Decrease the prompt length.

Selected Answer: A

A. Increase the temperature value.
The temperature parameter controls the randomness in token selection during text generation. Increasing the temperature value makes the model more likely to pick less probable words, resulting in more creative and varied responses. Conversely, a lower temperature makes the output more deterministic and focused, but less diverse.

Selected Answer: A

In large language models (LLMs), the temperature parameter controls the randomness of the output:

Higher temperature (>1) → more diverse and creative responses, but potentially less accurate.

Lower temperature (~0–0.3) → more deterministic and focused outputs.
