## EXAM AWS CERTIFIED DEVELOPER - ASSOCIATE DVA-C02 TOPIC 1 QUESTIO...

Exam question from Amazon's AWS Certified Developer - Associate DVA-C02
Question #: 274
Topic #: 1
[All AWS Certified Developer - Associate DVA-C02 Questions]

---

A company is preparing to migrate an application to the company's first AWS environment. Before this migration, a developer is creating a proof-of-concept application to validate a model for building and deploying container-based applications on AWS.

Which combination of steps should the developer take to deploy the containerized proof-of-concept application with the LEAST operational effort? (Choose two.)

A. Package the application into a .zip file by using a command line tool. Upload the package to Amazon S3.

B. Package the application into a container image by using the Docker CLI. Upload the image to Amazon Elastic Container Registry (Amazon ECR).

C. Deploy the application to an Amazon EC2 instance by using AWS CodeDeploy.

D. Deploy the application to Amazon Elastic Kubernetes Service (Amazon EKS) on AWS Fargate.

E. Deploy the application to Amazon Elastic Container Service (Amazon ECS) on AWS Fargate.

No, its not.
You are assuming the developer have intermediate to advanced knowledge on kubernetes. ECS is way easier if you are at a starting point from containers and it is going cloud native. Plus the only valid packaging options is the ECR one, that is WAY MORE easy to integrate to ECS then EKS...
