Selected Answer: B

The scenario of developing an application to analyze customer feedback and automatically classify it into categories like product quality, customer service, and delivery experience is an example of the AI concept called Natural Language Processing (NLP).

NLP involves the ability of machines to understand, interpret, and classify human language, especially in text form such as customer feedback. This allows the application to process the feedback text and categorize it correctly based on the content.

Selected Answer: B

This scenario involves analyzing and classifying text-based customer feedback into categories like product quality, customer service, and delivery experience. This is a classic use case for Natural Language Processing (NLP) — a branch of AI focused on understanding, interpreting, and generating human language.
