EXAM AWS CERTIFIED AI PRACTITIONER AIF-C01 TOPIC 1 QUESTION 240 DI...

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01

Question #: 240

Topic #: 1

[All AWS Certified AI Practitioner AIF-C01 Questions]

A bank is building a chatbot to answer customer questions about opening a bank account. The chatbot will use public bank documents to generate responses. The company will use Amazon Bedrock and prompt engineering to improve the chatbot's responses.

Which prompt engineering technique meets these requirements?

A. Complexity-based prompting

B. Zero-shot prompting

C. Few-shot prompting

D. Directional stimulus prompting

Selected Answer: C

when a company wants to use prompt engineering to improve a model's responses for a specific task—like a banking chatbot—providing a few examples of high-quality "Question and Answer" pairs is the most effective way to guide the model.

Not D - D. Directional stimulus Providing "hints" or "keywords" to guide output. While helpful, it is less common and less effective for consistent formatting than providing full few-shot examples.

Selected Answer: C

Few-shot prompting improves response quality by including a small number of example Q&A pairs directly in the prompt.

Selected Answer: B

The bank will:
-provide higher-quality answers
-use a consistent style
-utilize public documents
-without retraining the model

👉 Few-shot prompting is ideal for demonstrating how the model correctly uses information from documents through examples.

Selected Answer: D

Explanation:

The chatbot must answer questions using public bank documents and the company plans to use prompt engineering (not model retraining) with Amazon Bedrock.
This aligns with directional stimulus prompting, which provides explicit guidance or context (such as documents, policies, or instructions) directly in the prompt to steer the model's response.

Why D is correct:

Injects external context (bank documents) into the prompt

Guides the model to generate grounded, accurate answers

Commonly used for document-based Q&A chatbots in Bedrock

Selected Answer: D

✅ D. Directional stimulus prompting

Why:

The chatbot will generate answers based on public bank documents that are provided as input (stimulus) to guide the model's responses.

Directional stimulus prompting works by supplying external reference content (documents, excerpts, guidelines) in the prompt to steer the model toward accurate, grounded answers.

This aligns well with Amazon Bedrock use cases where prompts include retrieved document content.

Why the others are less suitable:

A. Complexity-based prompting → focuses on breaking down complex reasoning

B. Zero-shot prompting → no examples or document guidance

C. Few-shot prompting → uses examples, not source documents

Selected Answer: D

Directional stimulus prompting guides the foundation model to produce outputs aligned with business context. It's particularly effective for aligning responses with public documents and improving coherence.
From Bedrock Prompt Engineering Techniques documentation:
Explanation:
Directional stimulus prompting guides the foundation model to produce outputs aligned with business context. It's particularly effective for aligning responses with public documents and improving coherence.
From Bedrock Prompt Engineering Techniques documentation:
"Directional stimulus prompting provides structured prompts to steer the model output towards desired formats or behaviors using specific linguistic cues."

Selected Answer: C

Few-shot prompting improves responses by:
-Providing the model with a small number of example Q&A pairs
-Demonstrating the desired tone, structure, and accuracy
- Helping the model better align responses with domain-specific content (like banking procedures)

Why the other options are incorrect:
A. Complexity-based prompting -Used to decompose complex reasoning tasks, not customer Q&A.
B. Zero-shot prompting -Provides no examples; less effective for refining style and accuracy.
D. Directional stimulus prompting -Focuses on steering output style or direction, not grounding answers with examples.

Selected Answer: A

A is correct, because we had public bank documents
