Exam question from Amazon's AWS Certified Developer - Associate DVA-C02

Question #: 282

Topic #: 1

[All AWS Certified Developer - Associate DVA-C02 Questions]

A developer is testing a RESTful application that is deployed by using Amazon API Gateway and AWS Lambda. When the developer tests the user login by using credentials that are not valid, the developer receives an HTTP 405: METHOD_NOT_ALLOWED error. The developer has verified that the test is sending the correct request for the resource.

Which HTTP error should the application return in response to the request?

A. HTTP 401

B. HTTP 404

C. HTTP 503

D. HTTP 505

Selected Answer: A

C. HTTP 503: Service Unavailable - This status code indicates that the server is not ready to handle the request. It is usually a temporary state, often due to maintenance or overloading.

D. HTTP 505: HTTP Version Not Supported - This status code means that the server does not support the HTTP protocol version used in the request. It is a rare occurrence and typically indicates that the client is using an outdated or unsupported version of HTTP.
