EXAM AWS CERTIFIED AI PRACTITIONER AIF-C01 TOPIC 1 QUESTION 275 DI...

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01

Question #: 275

Topic #: 1

[All AWS Certified AI Practitioner AIF-C01 Questions]

HOTSPOT

-

An ecommerce company is developing a generative AI solution to create personalized product recommendations for its application users. The company wants to track how effectively the AI solution increases product sales and user engagement in the application.

Select the correct business metric from the following list for each business goal. Each business metric should be selected one time.

Measure how engaging the product recommendations are to users	Select... ▼ Average order value (AOV) Click-through rate (CTR) Retention rate
Determine the effect of the AI solution on the total value of user purchases	Select... ▼ Average order value (AOV) Click-through rate (CTR) Retention rate
Assess the AI solution's ability to encourage users to return to the platform	Select... ▼ Average order value (AOV) Click-through rate (CTR) Retention rate

✅ 1. Measure how engaging the product recommendations are to users

✔ Click-through rate (CTR)

CTR tells you how often users click on recommended items — the strongest measure of engagement with recommendations.

———

✅ 2. Determine the effect of the AI solution on the total value of user purchases

✔ Average order value (AOV)

AOV measures how much users spend per purchase, which directly evaluates the model's impact on revenue and total purchase value.

———

✅ 3. Assess the AI solution's ability to encourage users to return to the platform

✔ Retention rate

Retention rate measures how many users come back after using the product — perfect for evaluating long-term engagement.
