EXAM AWS CERTIFIED DEVELOPER - ASSOCIATE DVA-C02 TOPIC 1 QUESTIO...

Exam question from Amazon's AWS Certified Developer - Associate DVA-C02
Question #: 307
Topic #: 1
[All AWS Certified Developer - Associate DVA-C02 Questions]

A developer needs to deploy an application in three AWS Regions by using AWS CloudFormation. Each Region will use an AWS Elastic Beanstalk environment with an Application Load Balancer (ALB). The developer wants to use AWS Certificate Manager (ACM) to deploy SSL certificates to each ALB.

Which solution will meet these requirements?

A. Create a certificate in ACM in any one of the Regions. Import the certificate into the ALB that is in each Region.

B. Create a global certificate in ACM. Update the CloudFormation template to deploy the global certificate to each ALB.

C. Create a certificate in ACM in each Region. Import the certificate into the ALB for each Region.

D. Create a certificate in ACM in the us-east-1 Region. Update the CloudFormation template to deploy the certificate to each ALB.

Selected Answer: C

Regional Certificates: ACM certificates are regional resources. They cannot be shared across different Regions. Creating a certificate in each Region ensures proper certificate management and association with the ALBs.
CloudFormation Integration: CloudFormation allows you to define resources and their configurations for individual Regions. Creating certificates within the template for each Region aligns well with this approach.

Selected Answer: C

ACM is a regional service

Selected Answer: D

Given the requirements and cost-effectiveness, I recommend Option D—create a certificate in ACM in the us-east-1 Region and update the CloudFormation template to deploy the certificate to each ALB. This way, you maintain consistency while minimizing certificate management overhead.

Selected Answer: C

Certificates in ACM are regional resources. To use a certificate with Elastic Load Balancing for the same fully qualified domain name (FQDN) or set of FQDNs in more than one AWS region, you must request or import a certificate for each region.

Selected Answer: C

The correct solution is to create a certificate in each Region and to assign it to each ALB.
