EXAM AWS CERTIFIED DEVELOPER - ASSOCIATE DVA-C02 TOPIC 1 QUESTIO...

Exam question from Amazon's AWS Certified Developer - Associate DVA-C02
Question #: 323
Topic #: 1
[All AWS Certified Developer - Associate DVA-C02 Questions]

A developer is building a microservices-based application by using Python on AWS and several AWS services. The developer must use AWS X-Ray. The developer views the service map by using the console to view the service dependencies. During testing, the developer notices that some services are missing from the service map.

What can the developer do to ensure that all services appear in the X-Ray service map?

A. Modify the X-Ray Python agent configuration in each service to increase the sampling rate.

B. Instrument the application by using the X-Ray SDK for Python. Install the X-Ray SDK for all the services that the application uses.

C. Enable X-Ray data aggregation in Amazon CloudWatch Logs for all the services that the application uses.

D. Increase the X-Ray service map timeout value in the X-Ray console.

B ---->>> To ensure that all services appear in the AWS X-Ray service map, it's essential that each component of the application is properly instrumented to send data to X-Ray. The X-Ray SDK must be used within the application to capture and send the necessary telemetry data to X-Ray.
