Exam question from Amazon's AWS Certified Developer - Associate DVA-C02

Question #: 329

Topic #: 1

[All AWS Certified Developer - Associate DVA-C02 Questions]

A developer is storing many objects in a single Amazon S3 bucket. The developer needs to optimize the S3 bucket for high request rates.

How should the developer store the objects to meet this requirement?

A. Store the objects by using S3 Intelligent-Tiering.

B. Store the objects at the root of the S3 bucket.

C. Store the objects by using object key names distributed across multiple prefixes.

D. Store each object with an object tag named "prefix" that contains a unique value.

Selected Answer: C

By distributing object key names across multiple prefixes, you can ensure that the load is spread across many partitions.
