EXAM AWS CERTIFIED DEVELOPER - ASSOCIATE DVA-C02 TOPIC 1 QUESTIO...

Exam question from Amazon's AWS Certified Developer - Associate DVA-C02
Question #: 351
Topic #: 1
[All AWS Certified Developer - Associate DVA-C02 Questions]

A company has an internal website that contains sensitive data. The company wants to make the website public. The company must ensure that only employees who authenticate through the company's OpenID Connect (OIDC) identity provider (IdP) can access the website. A developer needs to implement authentication without editing the website.

Which combination of steps will meet these requirements? (Choose two.)

A. Create a public Network Load Balancer.

B. Create a public Application Load Balancer.

C. Configure a listener for the load balancer that listens on HTTPS port 443. Add a default authenticate action providing the OIDC IdP configuration.

D. Configure a listener for the load balancer that listens on HTTP port 80. Add a default authenticate action providing the OIDC IdP configuration.

E. Configure a listener for the load balancer that listens on HTTPS port 443. Add a default AWS Lambda action providing an Amazon Resource Name (ARN) to a Lambda authentication function.
